Senior Director, DRI Wildland Fire Science Center (WFSC)  
Editor, Aerosol Science and Technology (AS&T)

### **EDUCATION**

Ph.D.	Physics	1988	Colorado State University, Fort Collins, CO
DIPLOM (M.S.)	Physics	1982	Ludwigs-Maximilians Universität, München

### **RESEARCH EXPERIENCE**

Dr. Moosmüller's interests include experimental and theoretical research in optical spectroscopy as well as its applications to atmospheric, aerosol, and climate physics. His research focuses on development and application of real time, *in situ* measurement methods for aerosol light absorption, scattering, extinction, and asymmetry parameter, and new optical remote sensing techniques. These measurement methods are being used for ambient air monitoring and vehicle, fugitive dust, and biomass burning emission studies. He also works on other aspects of wildland fires including emissions and their atmospheric aging and fire induced soil hydrophobicity. Other research topics include (1) aerosol optical properties and their origin in aerosol morphology and aerosol complex refractive index spectra, (2) measurement of snow surface albedo, and (3) the influence of aerosol deposition on snow surface albedo and energy balance and on efficiency of photovoltaic solar modules. Dr. Moosmüller has also participated in the planning, fieldwork, and data analysis of major air quality studies. During his first three years at DRI, he was responsible for the airborne ozone lidar research program under a cooperative agreement with the USEPA.

Before joining DRI, Dr. Moosmüller was at Colorado State University where he investigated Brillouin light scattering of spin waves and millimeter-wave effective line widths in thin metal films. He also did research on high-spectral-resolution lidar and coherent light scattering techniques. This work included the development of supersonic flow measurement techniques and the investigations of spectral line shapes. His earlier work at the Ludwigs-Maximilians Universität in Munich, Germany and the Max Planck Institute for Quantum Optics in Garching, Germany focused on laser remote sensing.
